

## Openwork Graphene C<sub>2</sub> Cautious Model Portfolio

### Quarterly Update

#### Portfolio Objective

The portfolio is designed for a cautious investor. This is someone with limited experience of investment products, who is likely to be more familiar with bank and building society accounts rather than other types of investments. In general terms, they will understand that investment products should be held for a minimum period of five years. They will have a preference for outcomes that have a degree of certainty although they will understand that in certain circumstances their investments could fall or rise.

The portfolio is invested in a range of Omnis funds managed by highly regarded specialist fund managers who are experts in a particular field.

The portfolio's returns will be shown relative to the IMA Mixed Investment 20-60% Shares Sector Average, although it should be noted that the objective will be to provide a defensive long term investment rather than seeking to produce a superior return relative to the sector average, many of whose funds may have a strategically higher exposure to equities.

#### Risk Range

Openwork will risk-rate investors based on their answers to an Attitude to Risk questions and appropriate validation.

The 5 risk categories are:

- Limited Risk – lowest risk
- Cautious
- Balanced
- Adventurous
- Speculative – highest risk

This portfolio is risk-rated as Cautious.
